

# STURDY PolyPost Protector

Electric fencing is a necessity on all farms to provide herd control and for also area segregation. However using untreated timber posts, while relatively inexpensive, will rot and crack within 5 - 7 years. The introduction of our new PolyPost Protector, not only protects the post, but saves time when putting up electric fencing due to its integral insulators.

## KEY POINTS

The PolyPost Protector is suitable for 3" round or square posts.

No nails, screws or other fixings are required to install the protector - simply slip the PolyPost Protector over the top of the post.

The specially designed insulators provide a 400mm spacing and can accommodate wire or tape.

In order to maintain tension the facility to wrap the wire or tape has been incorporated in the insulators.

The PolyPost Protector is manufactured in one piece from UV Stabilised MDPE, which gives a strong and robust product.

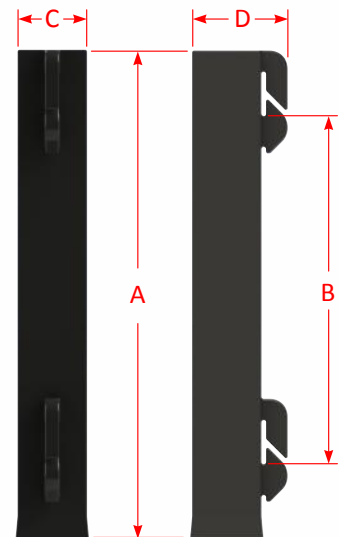

Suitable for Electrical Tape

Suitable for 3" Square or Round Posts
