

STURDY ROAD SAFETY PRODUCTS

STURDY Road Divider (Musoir)

The Sturdy Road Divider (Musoir) is designed to alert motorists of upcoming road intersections and sliproads as per European road network requirements.

- The Road Dividers are available in large and small sizes which cater for all national and motorway routes. They are also suitable for segregation at Toll Booths, Airports or Security Areas.
- Each Divider is fitted with Class 1 Reflective Material as standard but can be fitted with other grades upon request.
- The Dividers are manufactured from UV stabilised Polyethylene, which is a strong durable plastic. A flexible material (Affinity) is also available upon request.
- Both sizes come in the standard colours of green for national routes and blue motorways.
- The Road Divider can be anchored in place using the following methods:
 - Anchor Bolts can be used to fix them to the road.
 - They can be used as a grit bunkers and filled with sand or salt bags.
 - They can be partially filled with water.

Large Musoir

Width: 2000mm Depth: 1400mm Height: 1660mm Code: 234 - A Price:

Small Musoir

Width: 1070mm Depth: 790mm Height: 1210mm Code: 232 - A Price:

STURDY Delineator Pole

The Sturdy Delineator Pole has been developed in response to Ireland's ever increasing road infrastructure. Safety on our road network is vital.

- Each Delineator Pole is fitted with Class 1 Reflective Material as standard. This is made up of two green stripes either side of one white stripe.
- The Pole is fixed in place by inserting it into the steel base receptacle. This receptacle needs to be encased in concrete prior to installation of the pole.
- The Delineator Poles are located at either side of junctions on all national routes. This gives the motorist prior warning of upcoming junctions.

Pole - Diameter: 200mm Height: 1010mm (excl. base) Code: 234 - A Price:

Base - Diameter: 170mm Height: 155mm Code: 279 - A Price:

STURDY Road Pole

The Sturdy Road Pole has been designed as a marker pole which can be used to segregate roadways or indicate certain areas within a complex.

- The Sturdy Road Poles are ideal for use in car-parks, shopping centres, drive-thrus, airports or security areas.
- The Poles are available in standard colours of green and blue. Other colours are available upon request.
- The Poles can be left free-standing or fixed in place using anchor bolts.
- Each pole is fitted with two strips of Class 1 Reflective Material as standard.
- The Sturdy Road Pole is manufactured from Polyethylene, giving a product that will result in minimum damage to any vehicle, should an accident occur.

Diameter: 200mm Height: 700mm

Code: 236 - A Price:

STURDY Road Guard Barrier System

The Sturdy Road Guard range of products commands the respect of pedestrians and drivers alike. It forms a continuous traffic management system with no gaps between each unit. This prevents pedestrians and workers from stepping through this barrier system.

- It is a safer and a more practical alternative than road markers or cones as it has longer road coverage than many similar products currently on the market.
- Each Sturdy Road Guard weighs less than the recommended manual handling loads and can be easily arranged by just one person. Forklift slots allow for the lifting of stacked units.
- It has a low centre of gravity and can be partially filled with water to 'anchor' it in place. Holes are strategically placed to prevent the unit being overfilled and becoming too heavy to be manually handled.
- Removing the large rubber cap on the top of the Road Guard allows each unit to be filled with ease. A smaller rubber cap is located at the bottom of each unit to allow them to be emptied without the need to tip them over.
- Personalisation is available for large quantity orders. Each unit has a panel for customer signage.
- Unique Starter, Intermediate and End units are also available. Class 2 reflective warning signage can be applied as an optional extra.
- The system is extremely flexible and only 3 units are required to obtain a 90 degree bend giving approximately a 3m radius.
- 100 units giving 200 linear meters can be delivered to sites on one 40ft trailer.

Road Guard Barrier

Length: 2430mm Width: 660mm Height: 870mm Code: 384 - A Price:
