

STURDY MOLASSES FEEDER

The new STURDY Molasses Feeder is an ideal sheep feeding system for both molasses and liquid feeds during the winter months.

PRODUCT INFORMATION:

The product is designed to be strong and robust for use in agricultural environments. It is maintenance free, will not rust and will never require painting.

The hoof-proof shape of the feeder is designed to prevent livestock from standing on top of the product.

The 4 wheel unit, with a capacity of 350lts (one half tonne) of molasses, is suitable for a flock of up to 200 sheep.

The plate around each of the wheel openings prevents rainwater from entering the unit and ensures that the wheel cannot become dislodged or removed without opening the screws.

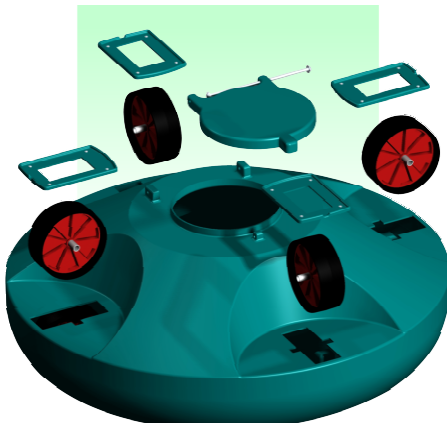

Technical Specifications:

Capacity:
350lt's
500Kg's

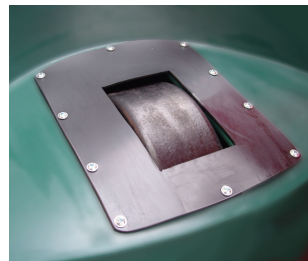

Diameter:
1,600mm

Height:
545mm

Product Code:
394 - A

PRODUCT FEATURES

Using their teeth, sheep can rotate the rubberised wheels which in turn draws the molasses up from inside the unit.

The large central lid can remain in an upright open position, unaided allowing for ease of filling.

The body and lid of the product is manufactured from U.V. stabilised medium density polyethylene and is fully recyclable.

The lid can be locked by means of a standard padlock. An upstand around the fill point prevents rainwater from entering the unit.

A smooth interior ensures that the product can be easily washed out if required.

*Note: Whilst our feeders have been designed for strength and are very durable and robust, they can be damaged if abused. All our products should be handled with care.
